We hereby express our intent to construct, for the above-described development, water and sewer facilities represented by the attached plans and specifications and upon completion, dedicate it to JEA.

As a condition to JEA acceptance of these facilities, our engineer will coordinate all phases of design and construction with JEA. In addition, we will notify JEA at least three working days prior to start of construction of the subject facilities. JEA shall be automatically vested with the right to enter upon the developer’s property for the purpose of inspecting construction the facilities throughout the progress of the project.

Upon completion, we will furnish JEA with as-built plans of the completed work. We also agree to submit a “Dedication of Infrastructure” acceptance package to JEA’s Development activity legally transferring the improvements at no cost to them. We understand that if JEA finds that the completion of the work based upon the as-built plans and inspections by JEA complies with the City Standards and Specifications and all conditions of extension of service are met, the work will be approved for Final Acceptance by JEA.

We acknowledge receipt of the “Water, Sewer and Reuse Guidelines” outlining the steps necessary for this construction and agree to adhere to those procedures as condition to receiving JEA services. We agree,should our project utilize capacity provided by a previous project, which is the subject of a cost recovery program, we will pay any and all fees due thereunder.

We have investigated and disclosed all existing easements within the property and provided that information to the design engineer for inclusion into the design drawings. Further, we recognize that the use of, or encroachment into, any JEA easement is subject to specific review and approval by JEA.

This is to certify that the plans and specifications attached herewith have been designed by me or individual(s) under my direct supervision and that we are aware of and will follow JEA procedures for design, construction, and dedication of the water and sewer facilities. All easements identified by the Owner/Developer have been clearly depicted on the utility plan sheets.

**Water, Sewer and Reuse Facilities**

Project: \_\_\_\_\_

Availability Nu#: \_\_\_\_\_

Type of Calculation	Included	Excluded
1. Potable Water Distribution (Including Fire Flow)	_____	_____
2. Reclaim Water Distribution	_____	_____
3. Gravity Sewer Collection	_____	_____
4. Sewage Pumping and Force Main	_____	_____

This is to certify that the attached hydraulic calculations were prepared by me or by individual(s) under my direct supervision and are in conformity with sound engineering principles and with JEA Water, Sewer and Reuse Design Guideline Manual. If calculations are included for potable water distribution facilities, I further certify that the facilities are adequate to meet the fire flow requirements set by the Office of the Fire Marshall and Applicable City Ordinances. Attached is a copy of the results from a Fire Flow Test for the subject project.
