DEPARTMENT OF THE ARMY
JACKSONVILLE DISTRICT CORPS OF ENGINEERS
POST OFFICE BOX 4970
JACKSONVILLE, FLORIDA 32232-0019

December 20, 2013

DEPARTMENT OF THE ARMY PERMIT
REGIONAL GENERAL PERMIT SAJ-14
SAJ-2005-09981

SUBAQUEOUS UTILITY AND TRANSMISSION LINES IN FLORIDA

Upon recommendation of the Chief of Engineers, pursuant to Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. § 403) and Section 404 of the Clean Water Act (33 U.S.C. § 1344), general authority is given for activities required for the installation, construction, maintenance, replacement, and repair of subaqueous utility and transmission lines; and, the outfall and intake structures associated with utility lines in all waters of the United States in the State of Florida (where the effluent from the outfall is authorized, conditionally authorized, or specifically exempted by, or otherwise in compliance with regulations issued under the National Pollutant Discharge Elimination System program (Section 402 of the Clean Water Act)). Authority also is given for discharges associated with the construction, maintenance, replacement, and repair of substations; and, the access roads for the construction and maintenance of subaqueous utility and transmission lines in non-navigable waters of the United States in the State of Florida. A “utility/transmission line” is defined as any pipe or pipeline for the transportation of any gaseous, liquid, liquescent, or slurry substance, for any purpose, and any cable, line, wire or optical fiber for the transmission for any purpose of electrical energy, telephone, telegraph messages, digital signal, Internet, and radio or television communication. The SAJ-14 is subject to the following conditions:

SPECIAL CONDITIONS:

1. The work herein authorized includes activities required for the installation, construction, maintenance, replacement, and repair of subaqueous utility and transmission lines, outfall and intake structures associated with the utility line, substations, and access roads for the construction and maintenance of same.
2. No work shall be performed until the applicant submits satisfactory plans for the proposed activity and receives written authorization from the District Engineer.
3. No work shall be authorized by SAJ-14 in waters of the United States within the following areas:
 - a. Monroe County;
 - b. Timucuan Ecological and Historical Preserve (Duval County); American crocodile (*Crocodylus acutus*) Critical Habitat, Biscayne Bay National Park Protection Zone (Miami-Dade County); the St. Lucie Impoundment (Martin County); and, areas identified in the Wild and Scenic Rivers Act (16 U.S.C. 1317, et seq.): the St. Mary’s River, from its headwaters to its

confluence with the Bells River; the entire Wekiva River, including Wekiva Springs Run, Rock Springs Run, the entire Seminole Creek, and Black Water Creek from its outfall at Lake Norris to its confluence with the Wekiva River; the Loxahatchee River from Riverbend Park downstream to Jonathan Dickinson State Park; the Okeechobee Waterway between the St. Lucie Lock in Martin County and the W.P. Franklin Lock in Lee County;

c. The following state parks: John Pennekamp Coral Reef State Park; Lignum Vitae Key State Botanical Site and Aquatic Preserve; Long Key State Park; Curry Hammock State Park; and Bahia Honda State Park;

d. Guana Tolomato Matanzas National Estuarine Research Reserve (St. Johns and Flagler Counties);

e. Within the coastal lakes, their outfalls, and/or the shore areas between the lakes and the Gulf of Mexico as depicted on the attached map (Figure 1);

f. Lake Miccosukee near Monticello;

g. Elkhorn coral (*Acropora palmata*), staghorn coral (*Acropora cervicornis*), Gulf sturgeon (*Acipenser oxyrinchus desotoi*) (marine and estuarine portions only), smalltooth sawfish (*Pristis pectinata*), North Atlantic right whale (*Eubalaena glacialis*), and Johnson's seagrass (*Halophila johnsonii*) critical habitat; or,

h. Federally-maintained deep-draft navigation channels.

4. In accordance with Section 7 of the Endangered Species Act, projects proposed within the following areas cannot be authorized until consultation on the project has been re-initiated and concluded with the U.S. Fish and Wildlife Service and/or the National Marine Fisheries Service, as appropriate:

a. within ½ mile of an active red-cockaded woodpecker (*Picoides borealis*) colony site;

b. in the Atlantic Ocean or Gulf of Mexico or on or contiguous with the Atlantic Ocean or Gulf of Mexico beaches;

c. within Gulf sturgeon designated critical riverine habitat under the jurisdictional responsibility of the U.S. Fish and Wildlife Service;

d. within the Florida panther (*Puma concolor coryi*) consultation area (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>); or,

e. within the areas that are habitat for federally-listed and proposed for listing freshwater mussels, which are the Escambia River, Yellow River, Choctawhatchee River, Chipola River, Apalachicola River, Ochlockonee River, Santa Fe and New Rivers, and Econfina Creek (Florida panhandle) and their creeks and tributaries.

5. Prior to verification of authorization, the dichotomous key titled, *The Corps of Engineers, Jacksonville District, U.S. Fish and Wildlife Service, Jacksonville Ecological Services Field Office, and State of Florida Effect Determination Key for the Wood Stork in Central and North Peninsular Florida – September 2008*; or, as appropriate, *The Corps of Engineers, Jacksonville District, U.S. Fish and Wildlife Service, Jacksonville Ecological Services Field Office, and State of Florida Effect Determination Key for the Wood Stork in South Florida – January 2010* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>), will be used to determine potential affects upon wood stork (*Mycteria americana*). Those projects determined to be a “may affect” to wood storks will not be authorized unless consistent with the Programmatic Consultation, or individual consultation on the project has been re-initiated and concluded with the U.S. Fish and Wildlife Service in accordance with the Endangered Species Act. Additionally, depending on the location of the project, some projects determined to be “may affect, not likely to adversely affect” will not be authorized until consultation on the project has been re-initiated and concluded. *Note: This key may be subject to revision at any time. It is our intention that the most recent version of this technical tool will be utilized during the evaluation of the permit application.*

6. Prior to verification of authorization, the dichotomous key titled, *The Corps of Engineers, Jacksonville District, and the State of Florida Effect Determination Key for the Manatee in Florida, March 2011* (<http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>), will be used to determine potential impacts to manatee (*Trichechus manatus*). Those determined to be a “may affect” to the manatee will not be authorized unless consistent with the 2011 Manatee Programmatic Consultation or individual consultation on the project has been reinitiated and concluded with the U.S. Fish and Wildlife Service in accordance with the Endangered Species Act. Additionally, depending on the location of the project, some projects determined to be “may affect, not likely to adversely affect” will not be authorized until consultation on the project has been re-initiated and concluded. *Note: The manatee key may be subject to revision at any time. It is our intention that the most recent version of this technical tool will be utilized during the evaluation of the permit application.*

7. For projects in, over, and/or under waters accessible to manatees, the permittee will implement the *Standard Manatee Conditions for In-Water Work, July 2011* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>) and/or requirements as appropriate for the proposed activity. *Note: These conditions may be subject to revision at any time. It is our intention that the most recent version of these conditions will be utilized during the evaluation of the permit application.*

8. For projects in waters accessible to sea turtles, smalltooth sawfish, Gulf sturgeon, Atlantic sturgeon (*Acipenser oxyrinchus*), or shortnose sturgeon (*Acipenser brevirostrum*), the permittee will utilize the *Sea Turtle and Smalltooth Sawfish Construction Conditions March 23, 2006* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/index.htm>) and/or requirements, as appropriate for the proposed activity. *Note: These conditions may be subject to revision at any time. It is our intention that the most recent version of these conditions will be utilized during the evaluation of the permit application.*

9. Prior to verification of authorization, the dichotomous key titled, *Eastern Indigo Snake Programmatic Effect Determination Key – January 2012* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>), will be used to determine potential affects upon eastern indigo snakes (*Drymarchon corais couperi*). Those projects determined to be a “may affect” to eastern indigo snakes will not be authorized unless consistent with the Programmatic Consultation or individual consultation on the project has been re-initiated and concluded with the U.S. Fish and Wildlife Service in accordance with the Endangered Species Act. Additionally, depending on the location of the project, some projects determined to be “may affect, not likely to adversely affect” will not be authorized until consultation on the project has been re-initiated and concluded. *Note: This key may be subject to revision at any time. It is our intention that the most recent version of this technical tool will be utilized during the evaluation of the permit application.* To ensure minimal impacts to eastern indigo snakes, for all projects proposed in eastern indigo snake habitat, the permittee shall implement the U.S. Fish and Wildlife Service’s *Standard Protection Measures for the Eastern Indigo Snake* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>).

10. Where a project is proposed in a county where any of the following species has been recorded, no authorization under SAJ-14 shall be given for any project until the applicant surveys the project site (project footprint and immediate adjacent areas which could be subject to indirect effects of the action such as project disturbance, habitat modification or loss, migration barrier, etc.) for their presence: (1) sand skink (*Neoseps reynoldsi*), bluetail mole skink (*Eumeces egregius lividus*), flatwoods salamander (*Ambystoma* sp.); Everglades snail kite (*Rostrhamus sociabilis plumbeus*), Florida scrub jay (*Aphelocoma coerulescens*), Florida grasshopper sparrow (*Ammodramus savannarum floridanus*), Audubon’s crested caracara (*Polyborus plancus audubonii*), Cape Sable seaside sparrow (*Ammodramus (=Ammospiza) maritimus mirabilis*), Highlands tiger beetle (*Cicindela highlandensis*), Miami blue butterfly (*Cyclargus thomasi bethunebakeri*), Schaus swallowtail butterfly (*Heraclides aristodemus ponceanus*); and, (2) any federally-listed plant species. The counties where these species are *likely* to be found are presented in Tables 1 and 2 (attached). If any of these species are found within the project site, no activities will be authorized until consultation on the project has been concluded with the U.S. Fish and Wildlife Service in accordance with the Endangered Species Act. *Note: Even though Tables 1 and 2 are somewhat outdated they represent the most comprehensive species lists the Corps is able to obtain. For questions on any other species not on these Tables, please contact the U.S. Fish and Wildlife Service office, which has responsibility for the geographic area in which the project is proposed.*

11. This permit has undergone consultation with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service on the listed species and any designated critical habitat noted on Table 3 (attached). If the proposed activity requires additional Section 7 consultation under the Endangered Species Act with the U.S. Fish and Wildlife Service and/or National Marine Fisheries Service on: 1) these or any other federally-listed threatened or endangered species or a species proposed for such designation; or, 2) designated critical habitat for these or any other federally-listed threatened or endangered species or habitat proposed to be designated as critical habitat for any federally-listed threatened or endangered species or proposed threatened or endangered species, until consultation is re-initiated and concluded, the proposed activity cannot be authorized under SAJ-14.

12. No work shall be authorized by SAJ-14 which may have direct or indirect adverse impacts to essential fish habitat such as but not limited to hard or soft corals, including listed corals, mangroves, estuarine emergent vegetation, marine emergent vegetation, and/or the following species of submerged aquatic vegetation: shoal grass (*Halodule wrightii*), paddle grass (*Halophila decipiens*), star grass (*Halophila engelmanni*), Johnson's seagrass (*Halophila johnsonii*), sago pondweed (*Potamogeton pectinatus*), clasping-leaved pondweed (*Potamogeton perfoliatus*), widgeon grass (*Ruppia maritima*), manatee grass (*Syringodium filiforme*), turtle grass (*Thalassia testudinum*), tapegrass (*Vallisneria americana*), horned pondweed (*Zannichellia palustris*), and eel grass (*Zostera marina*). Indirect effects include secondary and cumulative effects. In addition, the project cannot have adverse effects on any other essential fish habitat.

13. No utility and/or transmission lines will be embedded in the bottom of State Class I or Class II waters or aquatic preserves.

14. The discharge of dredged or fill material is authorized by this regional general permit for the installation, construction, maintenance, replacement, and/or repair of:

a. Subaqueous utility and transmission lines and outfall and intake structures associated with utility lines in all waters of the United States, excluding those areas listed in Special Condition 3 above, provided the discharge does not result in the permanent loss of greater than 1 acre of waters of the United States per 2-mile segment within waters of the United States. *Note: Waters of the United States temporarily affected by filling, flooding, excavation, or drainage, where the project area is restored to preconstruction contours and elevation, are not included in the calculation of permanent loss of waters of the United States. This includes temporary construction mats (e.g., timber, steel, geotextile) used during construction and removed upon completion of the work. Where certain functions and values of waters of the United States are permanently adversely affected (e.g., the conversion of a forested wetland to an herbaceous wetland) mitigation will be required to reduce the adverse effects of the project to the minimal level.*

b. Substations in non-tidal waters of the United States, excluding areas listed in Special Condition 3 above and all non-tidal wetlands adjacent to tidal waters, providing the discharge does not cause the permanent loss of greater than ½ acre of non-tidal waters of the United States.

c. Access roads in non-tidal waters of the United States, excluding areas listed in Special Condition 3 above and all non-tidal wetlands adjacent to tidal waters, for the construction and maintenance of subaqueous utility transmission lines and substations, provided the discharge does not result in the permanent loss of greater than 1 acre of waters of the United States per 2-mile segment within waters of the United States. *Note: Access roads shall be the minimum width necessary. Access roads constructed under this permit shall be made of pervious materials such as sand, gravel, limestone, etc. Access roads must be constructed so that the length of the road minimizes the adverse effects on waters of the United States and as near as possible to preconstruction contours and elevations (e.g., at grade corduroy roads or geotextile/gravel roads). Access roads constructed above preconstruction contours and elevations in waters of the United States must be properly bridged or culverted to maintain surface flows. Access roads*

used solely for construction of the overhead power line must be removed upon completion of the work and the area restored to preconstruction contours, elevations, and wetland conditions.

15. No work shall be performed until after the permittee provides notification to the owner(s) or operator(s) of any marked utilities in the work area, unless the permittee is the same entity as the owner(s) or operator(s).

16. Directional boring vaults, junction boxes, and/or pads will not be constructed within 50 feet of the top of the bank of waterways (rivers/streams). Horizontal directional drilling pilot, entrance, and exit holes must be the minimum diameter necessary; and, must be set back from the waterway (river/stream) bank by a minimum of 50 feet. Excavated materials and drilling mud must be stockpiled on non-wetland areas, where available. Appropriate fabric must be placed beneath all materials stockpiled in wetlands.

17. Except as noted in Special Conditions 18 and 19, below, all subaqueous utility and/or transmission lines authorized by this regional general permit must be installed a minimum of 6 feet below the bottom contour of any other water of the United States. The 6-foot criterion applies to the entire authorized width of the crossing, plus a minimum of 10 feet on each side of the crossing.

18. In all Florida counties, all subaqueous utility and/or transmission lines authorized by this regional general permit must be installed a minimum of 14 feet below the authorized depth of any federally-maintained shallow-draft navigation channel it crosses. The 14-foot criterion applies to the entire authorized width of the channel, plus a minimum of 25 feet outside the channel edges to allow for maintenance of the side slopes. Any activity within Federal rights-of-way shall require the permittee to enter into a consent-to-easement with the Real Estate Division, U.S. Army Corps of Engineers, Jacksonville or Mobile District, as appropriate, prior to the commencement of any construction activity.

19. All subaqueous transmission lines crossing over, under, or in flood control channels/canals in Federal projects (either federally or locally maintained) which are installed with horizontal direction drilling (HDD) shall ensure the top of the HDD boring is a minimum of 10 feet beneath the bottom of the channel plus a minimum 25 feet outside the channel edges and the estimated total drilling fluid pressure is less than 10 psi. Projects not in compliance with these criteria shall not be eligible for authorization under SAJ-14 until case specific review has been completed by the Jacksonville District Engineering Division in accordance with 33 U.S.C. 408 and the project has received approval from the Jacksonville District Commander.

20. In all Florida counties, all projects beneath a Federal flood control or navigation channel (either federally or locally maintained) shall, upon completion of work, provide an as-built survey showing the horizontal and vertical location (X-Y-Z coordinates in NAD 83 and NAVD 88) of the object below the channel as it enters and exits the design edges of the authorized width of the channel, plus a minimum of 25 feet outside the channel edges.

21. Evaluation of applications for utility line crossings of levees, dikes, dams, or other water retaining structures will require case specific review by the Jacksonville Engineering Division in

accordance with 33 U.S.C. 408 and approval from the Jacksonville District Commander prior to authorization under the SAJ-14.

22. Material resulting from trench excavation may be temporarily sidecast (up to three months) into waters of the United States, provided that the material is not placed in such a manner that it is dispersed by currents or other forces. The District Engineer may extend the period of temporary side casting not to exceed a total of 180 days, where appropriate. The top 6-12 inches of the trench should normally be backfilled with topsoil from the trench. Furthermore, the trench cannot be constructed in such a manner as to drain waters of the United States (e.g., backfilling with extensive gravel layers, creating a French drain effect). For example, utility line trenches can be backfilled with clay blocks to ensure that the trench does not drain the waters of the United States through which the utility line is installed. Any exposed slopes and stream banks must be stabilized immediately upon completion of the utility line crossing of each waterbody.

23. Dredged or fill material placed as backfill or bedding for subaqueous utility and transmission lines must not change the preconstruction bottom contours. Excess material must be moved to an upland disposal area.

24. The permittee will install signs at the shoreline to notify navigational interests of the location of subaqueous utility and transmission lines.

25. No project will be authorized under SAJ-14 if the proposed fill activity will result in upstream waters of the United States being removed from Federal jurisdiction.

26. Compensatory mitigation for unavoidable permanent impacts to waters of the United States will be required. To offset lost wetland and other aquatic resource functions, environmentally appropriate mitigation at a federally-approved mitigation bank will be accepted. Mitigation undertaken at a federally-approved mitigation bank will be at a ratio of 1:1 (impact acreage:credit). Mitigation not undertaken at a mitigation bank will be required to be in accordance with the guidelines found in the Final Compensatory Mitigation Rule (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>) and will provide compensatory functional mitigation using the Uniform Mitigation Assessment Methodology (UMAM) or other acceptable assessment methodology.

27. Turbidity control measures, including best management practices, shall be used throughout construction to control erosion and siltation to ensure there are no violations of State Water Quality Standards as established in sections 62-4.242 and 62-4.244 of the Florida Administrative Code and Chapters 62-302, 62-520, 62-522, and 62-550 of the Florida Administrative Code.

28. Activities qualifying for this regional general permit must be authorized by the applicable permit or exemption under Part IV of Chapter 373, Florida Statutes (F.S.), and by any authorization required to use or occupy state-owned submerged lands (SSL) under Chapter 253, F.S., and, as applicable, Chapter 258, F.S.. Such permit, issued by the Department of Environmental Protection, a water management district under Section 373.069, F.S., or a local

government with delegated authority under Section 373.441, F.S., will provide the applicable Water Quality Certification (WQC) or waiver thereto, and Coastal Zone Consistency Concurrence (CZCC). WQC is waived for activities authorized under this regional general permit that qualify for an exemption under Section 403.813(1) or 373.406, F.S., or the rules of the Florida Administrative Code (F.A.C.) adopted under Part IV of Chapter 373, F.S..

29. Where the proposed subaqueous utility or transmission line is to be installed in navigable waters of the United States, at least 2 weeks prior to the start of the authorized work, the permittee must notify the National Oceanic and Atmospheric Administration (NOAA) and the Corps in writing that the work is commencing; and, again, upon completion of the work. The permittee shall notify the District Engineer in writing at the letterhead address, attention Regulatory Division; and, the NOAA, either in mailed correspondence to Nautical Data Branch Office of Coast Survey N/CS26, 1315 East-West Highway, Silver Spring, MD 20910-3282 or by electronic mail correspondence, with scans of the requisite documents attached, through osc.ndb@noaa.gov. The post-construction notification will include “as-built plans”, signed and sealed by a registered surveyor/engineer licensed in the State of Florida, that certify the project is constructed as authorized; and, must include an accurate depiction of the location and configuration of the completed activity in relation to the mean high water of the navigable water.

30. Cultural Resources and/or Historic Properties:

a. No structure or work shall adversely affect, impact, or disturb properties listed in the *National Register of Historic Places* (NRHP) or those eligible for inclusion in the NRHP.

b. If during the ground disturbing activities and construction work within the permit area, there are archaeological/cultural materials encountered which were not the subject of a previous cultural resources assessment survey (and which shall include, but not be limited to: pottery, modified shell, flora, fauna, human remains, ceramics, stone tools or metal implements, dugout canoes, evidence of structures or any other physical remains that could be associated with Native American cultures or early colonial or American settlement), the Permittee shall immediately stop all work in the vicinity and notify the Corps. The Corps shall then notify the Florida State Historic Preservation Officer (SHPO) and the appropriate Tribal Historic Preservation Officer(s) (THPO(s)) to assess the significance of the discovery and devise appropriate actions.

c. A cultural resources assessment may be required of the permit area, if deemed necessary by the SHPO, THPO(s), or Corps, in accordance with 36 CFR 800 or 33 CFR 325, Appendix C (5). Based, on the circumstances of the discovery, equity to all parties, and considerations of the public interest, the Corps may modify, suspend or revoke the permit in accordance with 33 CFR Part 325.7. Such activity shall not resume on non-federal lands without written authorization from the SHPO and the Corps.

d. In the unlikely event that unmarked human remains are identified on non-federal lands, they will be treated in accordance with Section 872.05 Florida Statutes. All work in the vicinity shall immediately cease and the Permittee shall immediately notify the medical examiner, Corps, and State Archeologist. The Corps shall then notify the appropriate SHPO and THPO(s). Based, on the circumstances of the discovery, equity to all parties, and considerations of the public

interest, the Corps may modify, suspend or revoke the permit in accordance with 33 CFR Part 325.7. Such activity shall not resume without written authorization from the State Archeologist, SHPO, and the Corps.

e. In the unlikely event that human remains are encountered on federal or tribal lands, or in situations where Archaeological Resources Protection Act of 1979, or Native American Graves Protection Repatriation Act of 1990 applies, all work in the vicinity shall immediately cease and the Permittee immediately notify the Corps. The Corps shall then notify the appropriate THPO(s) and SHPO. Based, on the circumstances of the discovery, equity to all parties, and considerations of the public interest, the Corps may modify, suspend or revoke the permit in accordance with 33 CFR Part 325.7. After such notification, project activities on federal lands shall not resume without written authorization from the Corps, and/or appropriate THPO(s), SHPO, and federal manager. After such notification, project activities on tribal lands shall not resume without written authorization from the appropriate THPO(s) and the Corps.

31. This permit does not authorize stream channelization or the bank-to-bank filling, relocating, and/or culverting of perennial or intermittent streams. The authorized activities must not increase flooding or negatively impact the pre-project hydraulic flow characteristics or water quality of any affected stream.

32. Within 60 days of completion of the authorized work, and any mitigation required, a *Self-Certification Statement of Compliance* (reference <http://www.saj.usace.army.mil/Missions/Regulatory/SourceBook.aspx>) must be completed and submitted to the Corps. The form must reference the site specific Department of the Army permit number associated with the work. The completed form can be submitted electronically to (cesaj-complydocs@usace.army.mil), otherwise, it must be mailed to the Jacksonville District, Enforcement Section, Post Office 4970, Jacksonville, Florida 32232-0019.

33. Fill material used with a project shall be limited to suitable, clean fill material, which excludes materials such as trash, debris, car bodies, asphalt, construction materials, concrete block with exposed reinforcement bars, and any soils contaminated with any toxic amounts (see Section 307 of the Clean Water Act).

34. Reduction and/or elimination of turbid water conditions and the erosion of disturbed or filled areas in adjacent water bodies and wetlands are to be achieved through the use of silt curtains, silt screens, or other appropriate erosion control measures, between the construction area and wetlands or surface waters, during periods of fill placement and construction. Such devices shall be properly maintained until such time as those disturbed areas become sufficiently stabilized by natural recruitment of vegetation or other measures.

35. Conformance with descriptions and quantities contained herein does not necessarily guarantee authorization under this regional general permit. The District Engineer reserves the right to require that any request for authorization under this regional general permit be evaluated as an individual permit.

36. Authorization under this regional general permit is void at any time if the information provided by the applicant in support of the permit application proves to have been false, incomplete, or inaccurate.

37. The permittee shall defend and hold the Government harmless from any and all claims by reason of the placement and installation of aerial transmission lines authorized by this permit.

38. For projects authorized under the SAJ-14 in navigable waters of the United States, the permittee understands and agrees that, if future operations by the United States require the removal, relocation, or other alteration, of the structures or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps of Engineers, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration.

39. In order to assure that SAJ-14 does not impair the usefulness of existing Corps projects and that it is not injurious to the public, the following special conditions are required pursuant to 33 U.S.C. 408 authorization:

a. Construction of directional boring vaults, junction boxes, and/or pads are not allowed within 25 feet of the top of the bank of any federal project.

b. Subaqueous utility lines installed via horizontal direction drilling (HDD) within a federal project must ensure the top of the HDD boring is a minimum of 14 feet beneath the bottom of any shallow draft navigation channel or 10 feet beneath the bottom of any flood control channel, and the estimated total drilling fluid pressure is less than 10 psi.

c. Subaqueous utility lines installed via trenching must be a minimum of 14 feet below the authorized depth of any shallow draft federal navigation channel including a minimum of 25 feet outside the channel edges to allow for maintenance of the side slopes.

d. Subaqueous utility lines installed via trenching must be a minimum of 10 feet below the authorized depth of any federal flood control channel including a minimum of 25 feet outside of the channel edges.

e. All projects beneath a Federal flood control or navigation channel will be required to provide at the completion of work, an as-built survey showing the horizontal and vertical location (X-Y-Z coordinates in NAD 83 and NAVD 88, as applicable) of the object below the channel as it enters and exits the design edges of the authorized width of the channel, plus a minimum of 25 feet outside the channel edges.

f. Evaluation of applications for utility line crossings of levees, dikes, dams, or other water retaining structures and crossings beneath deep draft federal navigation projects will require case specific review and approval pursuant to 33 U.S.C. 408 prior to authorization under the SAJ-14.

40. SAJ-14 shall be valid for a period of 5 years from the date of issuance unless suspended or revoked by issuance of a public notice by the District Engineer. The Corps, in conjunction with the Federal resource agencies, will conduct annual reviews to ensure that continued use of the permit during the 5-year authorization period is not contrary to the public interest. If SAJ-14 expires or is revoked prior to completion of the authorized work, authorization of activities that have commenced or are under contract to commence in reliance on SAJ-14 will remain in effect provided the activity is completed within 12 months of the date SAJ-14 expired or was revoked.

41. The permittee shall perform all work and subsequent actions in accordance with the attached general conditions.

BY AUTHORITY OF THE SECRETARY OF THE ARMY

Alan M. Dodd
Colonel, U.S. Army
District Engineer

*Finding also applies to Designated Critical Habitat
MANLAA – may affect not likely to adversely affect
NE – no effect

GENERAL CONDITIONS FOR DEPARTMENT OF THE ARMY GENERAL PERMITS

General Conditions

1. The time limit for completing the work authorized ends on **December 20, 2018**.
2. You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with General Condition 4 below. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.
3. If you discover any previously unknown historic or archeological remains while accomplishing the activity authorized by this permit, you must immediately notify this office of what you have found. We will initiate the Federal and State coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.
4. If you sell the property associated with this permit, you must obtain the signature and mailing address of the new owner in the space provided below and forward a copy of the permit to this office to validate the transfer of this authorization.
5. You must allow representatives from this office to inspect the authorized activity at any time deemed necessary to ensure that it is being or has been accomplished in accordance with the terms and conditions of your permit.

Further Information:

1. Limits of this authorization.
 - a. This permit does not obviate the need to obtain other Federal, State, or local authorizations required by law.
 - b. This permit does not grant any property rights or exclusive privileges.
 - c. This permit does not authorize any injury to the property or rights of others.
 - d. This permit does not authorize interference with any existing or proposed Federal projects.
2. Limits of Federal Liability. In issuing this permit, the Federal Government does not assume any liability for the following:
 - a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.
 - b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.
 - c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.
 - d. Design or construction deficiencies associated with the permitted work.
 - e. Damage claims associated with any future modification, suspension, or revocation of this permit.

3. Reliance on Applicant's Data: The determination of this office that issuance of this permit is not contrary to the public interest was made in reliance on the information you provided.

4. Reevaluation of Permit Decision: This office may reevaluate its decision on this permit at any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to, the following:

- a. You fail to comply with the terms and conditions of this permit.
- b. The information provided by you in support of your permit application proves to have been false, incomplete, or inaccurate (see 3 above).
- c. Significant new information surfaces which this office did not consider in reaching the original public interest decision.

5. Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring you comply with the terms and conditions of your permit and for the initiation of legal action where appropriate. You will be required to pay for any corrective measures ordered by this office, and if you fail to comply with such directive, this office may in certain situations (such as those specified in 33 CFR 209.170) accomplish the corrective measures by contract or otherwise and bill you for the cost.

6. When the structures or work authorized by this permit are still in existence at the time the property is transferred, the terms and conditions of this permit will continue to be binding on the new owner(s) of the property. To validate the transfer of this permit and the associated liabilities associated with compliance with its terms and conditions, have the transferee sign and date below.
