Addendum Number: **One (1)**

Title: **99365 – Supply of two activated carbon injection systems and sorbent materials**

JEA Solicitation Number: **99365**

Response Due Date: **May 27, 2020**

Due Date Time: **12:00 PM**

Time of Opening: **2:00 PM**

This addendum is for the purpose of making the following additions, deletions and changes.

SUPPLIER INQUIRY: Can JEA clarify what is needed to accommodate item 5 of the 3.1.1.1 System Requirements?

3.1.1.1. System Requirements

The activated carbon injection system must meet the below requirements:

1. Ability to pneumatically inject powdered activated carbon accurately from the bulk bag system to the injection ports located at the 110' elevation of the spray dryer absorber inlet duct
2. Ability to feed powdered activated carbon with a continuous feed rate able to be set anywhere in the range of 2 to 40 pounds per hour range
3. All analog I/O signals shall be 4-20mA
4. Start, stop and automatic carbon dose rate adjustment based DCS signals

5. Active product weighing system with feedback capability to DCS

JEA RESPONSE: Carbon injection is on a pounds/hour basis – Item # 5 means JEA needs input from skid to DCS of current carbon weight so the injection rate can be determined and so alarms for no flow and low weight can be triggered.

REPLACE: The Bid Form issued with the original solicitation is replaced by the Bid Form issued with the Addendum 1. The Bid form is changed from 70,000 Tons to 70,000 lbs.
