RE: STATISTICALLY SIGNIFICANT LEVEL EVALUATION
BYPRODUCT STORAGE AREA B – ST. JOHNS RIVER POWER PARK
JACKSONVILLE, FLORIDA

Dear Mr. McClure:

Golder Associates Inc. (Golder) is providing this Statistically Significant Level (SSL) evaluation summarizing the updated statistical analysis of the results from the December 2019 semi-annual Coal Combustion Residual (CCR) Rule\(^1\) assessment monitoring events for the Byproduct Storage Area B (BSA-B) at the St. Johns River Power Park (SJRPP).

A statistical evaluation following the first annual and subsequent semi-annual event (June 2018) identified one SSL above the GWPS for Radium 226+228 at CCR-6. Statistical evaluations have been completed following receipt of results from semi-annual assessment monitoring events. The statistical analyses are performed in accordance with the Statistical Analysis Plan for CCR Groundwater Monitoring (Golder, 2017).

One additional SSL above the GWPS has been identified for Radium 226+228 at CCR-7 based on the updated statistical analysis of the sampling results from the December 2019 semi-annual sampling event. Golder recommends amending the assessment of corrective measures completed in June 2019 to incorporate this SSL.

Sincerely,

Golder Associates Inc.

Samuel F. Stafford, PE
Senior Project Engineer

Donald J. Miller
