

SF6 Gas Testing

1. The purpose of this project is to test the SF6 gas in JEA's fleet of gas circuit breakers.
2. There are 321 circuit breakers to be tested across 52 substations.
3. Gas to be tested in the circuit breakers' "as found" state. This will most often be closed and in service.
4. As information, JEA does not trip on low gas. Should an unintended gas release occur during testing, JEA's standard is to block trip and alarm on low gas.
5. Gas testing equipment is to be of a zero gas loss design. Gas is extracted, tested, and returned to the circuit breaker.
6. Tests are to include Moisture PPM, SO2 Byproducts PPM, and Purity %.
7. A spreadsheet listing the circuit breakers to be tested is attached.
8. Test date and test results are to be recorded on the attached spreadsheet.
9. Results outside of the "Good" range listed on the spreadsheet shall be reported immediately to the JEA contact.
10. Once testing is completed, all valves and covers shall be returned to normal operating position.
11. The contractor will work independently. No JEA escort will be provided.
12. The contractor can choose their working hours.
13. This project is to be worked continuously from start to finish. Contractor may take off weekends and holidays at their discretion.
14. All contractors who intend to perform work in a JEA substation must complete the four hour JEA Substation Safety Class prior to entering a JEA substation. If you are awarded this contract, please contact Jim Ayers to schedule training. ayerjl@jea.com 904-665-5362
15. Invoices are to be submitted monthly. One invoice per month.
